

Thinking Strategies ONLINE

Thinking Strategies for Numeracy Online Training

COURSE OVERVIEW

This course guides practitioners through a way to teach thinking strategies using workplace Numeracy applications. The *Thinking Strategies for Numeracy* course consists of two online sessions (each 2 hours or less) that introduce the thinking strategies and demonstrate how to teach these strategies using the SkillPlan publication, *Thinking Strategies for Numeracy*. The sessions will include a detailed orientation to the publication and its companion e-book teaching aid.

Training & Certification (2 online sessions, 4 hours + 4 project hours)
Participants are required to attend both scheduled online training sessions. For the first session, an assignment will be given for discussion at the next session. The final assignment is to be submitted.

SkillPlan will issue a *Thinking Strategies for Numeracy Certificate* to those who attend and participate in both sessions and successfully complete the post-session assignment. This course qualifies for (TBA) credits for Essential Skills credentials in some jurisdictions.

WHO SHOULD ENROL?

Participants who are interested in introducing thinking skills and work-related numeracy materials into instructional settings are encouraged to enrol. This course has been developed for practitioners who have access to the publication, *Thinking Strategies for Numeracy*, but have not yet used it or have limited experience using it with learners. Practitioners who see the need for teaching thinking skills but do not have the time or resources to develop their own materials will find this material and course invaluable.

PRE-REQUISITES

Previous training and/or experience with Essential Skills is strongly recommended. For more information on Essential Skills, visit http://www.hrsdc.gc.ca/eng/workplaceskills/essential_skills/general/home.shtml.

Participants should be active in instruction, although program directors and interested parties are also welcome.

TECHNICAL REQUIREMENTS

Participants need to have a Windows or Mac computer with high speed internet connection and telephone access. Headsets for the phone are useful for hands free use. Participants will be provided with instructions by email one day prior to course start. Technical assistance is available.
